Art Unit: 2164

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-27 drawn to a method for monitoring domain name registrations, classified in class 705, subclass 1 and class 707, subclass 104.1.
- II. Claims 28-30, drawn to a system for monitoring registrations, classified in class 709, subclasses 203 and 217.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus can be used to practice different processes. For example, the server could monitor new stories from a news database, stock quotes from a financial database, or instant messages from an instant messaging database.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
